

INTERPARFUMS

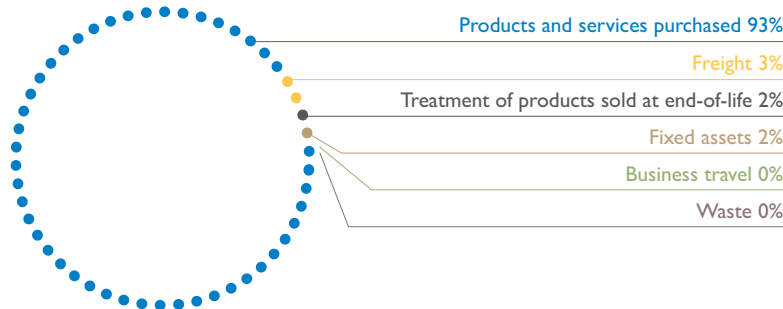

2024 CARBON FOOTPRINT (2023 FIGURES)

Interparfums' total carbon footprint is calculated in accordance with international standards, and namely the Green House Gas Protocol (GHG Protocol) for the conversion of all emission sources into tons of CO₂ equivalent and the Base Carbone®, a public database of emission factors made available by the French Agency for Ecological Transition (ADEME).

- 2023 Carbon footprint: **191,252 tons of CO₂ equivalent**
- 2023 Carbon intensity: **240 kg of CO₂ per € thousands of sales** (in the low range of our activity sector)

In tons CO ₂ equivalent	2023	Weight
Scope 1 (energy consumption of gas and fuel)	194	0,1%
Scope 2 (electricity consumption)	27	0,0%
Scope 3 (other indirect emissions)	191,031	99,9%
Total	191,252	100,0%

Main Scope 3 emissions

In tons CO ₂ equivalent	2021	2022	2023	2022/ 2023 change
Carbon footprint (Scope 1, 2 and 3)	174,940	152,937	191,252	25,1%

In kg of CO ₂ per € thousands of sales	2021	2022	2023	2022/ 2023 change
Carbon intensity	312	216	240	11,1%

The variations between one year and the next, reflect the inclusion of additional Scope 3 data from certain suppliers (who previously did not include this data in their calculations). Moreover, inventories are higher in 2023 than in 2022 (+32%), notably as a result of the manufacture of Lacoste perfumes in preparation for the launch of sales in January 2024. There was also more business travels in 2023 than in 2022. These different factors contributed to the rise in Scope 3 emissions. Finally, the growth in the amount of royalties paid (expressed in monetary ratios) also has an impact on the carbon footprint.
