

INTERPARFUMS

2025 CARBON FOOTPRINT (2024 FIGURES)

Interparfums' total carbon footprint is calculated in accordance with international standards, and namely the Green House Gas Protocol (GHG Protocol) for the conversion of all emission sources into tons of CO₂ equivalent and the Base Carbone®, a public database of emission factors made available by the French Agency for Ecological Transition (ADEME).

- 2024 Carbon footprint: **213,171 of CO₂ equivalent**
- 2024 Carbon intensity: **242 kg of CO₂ per € thousands of sales** (in the low range of our activity sector)

<i>(in tons CO₂ equivalent)</i>	2024	Weight
Scope 1 (energy consumption of gas and fuel)	194	0.09%
Scope 2 (electricity consumption)	39	0.02%
Scope 3 (other indirect emissions)	212,938	99.89%
Total	213,171	100.0%

Main Scope 3 emissions

	2021 (Base year)	2023	2024	2021/2024 Change
Carbon footprint (Scope 1, 2 and 3) <i>(in tons of CO₂ equivalent)</i>	174,940	244,498	213,171	+21.8%
Carbon intensity <i>(in kg of CO₂ per € thousands of sales)</i>	312	279	242	-22.4%
Carbon intensity <i>(in kg of CO₂ per L of perfume)</i>	77	68	66	-14.6%

The variations between one year and the next reflect the inclusion of additional Scope 3 data from certain suppliers (who previously did not include this data in their calculations). Preparations for major launches in 2025 also contribute to the increase in Scope 3 emissions. Finally, the upward trend in the amount of royalties paid (translated into monetary ratios) also has an impact on the carbon footprint. The rise in "fixed assets" emissions is linked to real estate transactions and technical investments, notably in new molds and tooling.
